TRUCK BODY**

CONSTRUCTION

Our unique Snap-Lock wall panels are manufactured from high-strength, light-weight and corrosion-resistant aluminum. As the panels snap together, they form integral wall posts at 12" on center that require no mechanical or adhesive fasteners. The wall panel is rigid and substantial, making it the perfect choice for custom designed truck bodies, trailers and enclosures. These 10 gauge extruded aluminum Snap-Lock panels provide the core structure of our units. This heavy duty design outlasts traditional sheet and post techniques while providing substantial weight savings. All this with a rivet-free exterior shell, leaving a smooth finished surface perfectly suited for graphics or striping.

CONSTRUCTION

Our Superior Fabrication Methods Include:

- Frames constructed with heavy duty steel or lightweight, corrosive resistant aluminum
- ITB doors are fabricated from our own custom aluminum door and wall panel extrusions and feature high quality automotive style rubber seals to keep out moisture and dust
- Roofs are constructed with a one piece aluminum roof sheet with crowned roof bows spaced to suit the design. Walk-on and translucent options are available
- Interior fabrication - simple freight handling interiors to Hollywood styling options with commercial grade quality. Closed cell urethane foam or rigid board insulation available.
- Choice of flooring options in steel, aluminum, wood or composite and industrial coverings
- Automotive polyurethane pain, each unit is matched to the chassis or customer specifications
