MEDICAL TESTING

Emergency Response/Municipalities
& Government

At ITB we are dedicated to tackling the problems of the medical industry and collaboratively innovating our way towards solutions. From viral outbreaks to narcotic epidemics, ITB designs for Medical Testing and Response allow Medical Professionals to customize components, tools and meet requirements in ways that are not commonly offered by standard manufacturers. Perhaps an agile Step Van could be tasked to test for viral infection at a nursing home, a mobile command center could be deployed to coordinate with hospitals and governments in a major city or maybe a mobile expandable hospital trailer with up to 850 feet of usable space could be deployed to smaller communities lacking the proper medical resources. ITB is committed to the advancement of creative solutions for our top Medical Professionals and Government Officials.
