SPLICER VAN

Utilities/Municipal/Energy Sector

ITB Splicer Vans are custom built mobile work stations for fiber optic splicing, installation and servicing operations. Custom designed to exactly suit your needs for everything from power supply options, tool storage, cable access doors, to climate control and interior/exterior lighting. These bodies ensure you have all your tools at hand and the conditions perfect for maximal comfort, ergonomics, and - most importantly - safety and productivity. Our rugged extruded aluminum bodies have excellent life cycles to ensure you see a great return on your investment while keeping yourself or your employees comfortable and happy for many years of service.
